DRUTEX
THE BEST WINDOWS

Grills make the windows look stylish and give them an exceptional design.

DRUTEX offers:

Inner-pane grills - they are made of aluminium and available in four widths: 8mm, 18mm, 26mm and 45mm . They are a part of glass package and are solidly built into the frame between the panes.

Such grills play mainly decorative role and can be covered with woodlike coat or painted with any of RAL colours. There is also a possibility to apply two colours- different colour visible from outside of the building and different from inside.

www.drutex.eu

Glued grills - they are available in three widths: 27 mm, 45 mm and 65mm. Those grills are offered in all colours of the windows. Being glued on the pane they imitate separate window pane packages with an aluminium frame (duplex) inside the package. This aluminium frame divides the window pane accordingly to the division , which is created by the PVC elements.

The client has the opportunity to choose different grills' colours as well as the colours of the seals, which can be grey or black.

Vienna grills - wooden grills-are designed for wooden doors and windows and imitate separate window pane packages with an aluminium frame inside the package. The frame divides the window pane accordingly to the division created by the wooden elements.

The configuration of the grills does not necessarily has to create rectangular shapes. The expectations of our customers supported by the latest technological solutions prove that it is also possible to produce grills in the shape of arch, diamond, "sun" and other configurations. This is all to meet your individual needs.
